

■ ****ATS Match Score (0–100)****

- **Score: 72**

■ ****Missing Skills or Keywords****

- **Data wrangling:** Mentioned in job description but not explicitly listed on resume.
- **Feature engineering:** Crucial skill mentioned in the job description but absent from the resume.
- **Cloud platforms (GCP):** While AWS is mentioned, GCP is not listed on the resume.
- **PyTorch:** Mentioned as a plus in the job description but not included in the resume.

■ ****Section-by-Section Feedback****

Education

- **Feedback:** Education is well-listed, but include relevant coursework that aligns with the job requirements.

Experience

- **Feedback:**
- Good detail on technical implementations and business impact.
- Ensure all experiences are within realistic date ranges (there are future dates listed).

Projects

- **Feedback:**
- Projects are relevant and well-explained.
- Include more specific results or metrics of success to enhance impact.

Technical Skills

- **Feedback:**
- Good range of skills listed.
- Consider adding more specific examples of using Python and SQL in projects or jobs to demonstrate proficiency.

Certifications

- **Feedback:**

- Certifications are relevant but consider adding more related to data science and machine learning to strengthen your profile.

■ ****Project Ideas****

- **Predictive Sales Model:** Develop a model that predicts sales volumes based on historical data and market trends to demonstrate skills in predictive modeling and feature engineering.
- **Customer Segmentation Analysis:** Use clustering techniques to segment customers based on buying behavior and preferences to showcase skills in data mining and AI-driven methodologies.

■ ****Recommended Certifications****

- **AWS Certified Machine Learning - Specialty:** Validates and enhances your expertise in building, training, tuning, and deploying machine learning models using AWS cloud.
- **Professional Data Engineer on Google Cloud Platform:** Will help showcase your ability in handling GCP tools and big data solutions on the cloud.

■ ****Interview Prep Resources****

- **LeetCode** for practicing SQL and Python coding problems.
- **Kaggle** for machine learning case studies and competitions.
- **Coursera** course on "Machine Learning Specialization" by Andrew Ng to deepen understanding of ML concepts.

⇒■ ****Improved Summary****

```markdown

Data Scientist with advanced degrees in Applied Computer Science and proven expertise in Python, SQL, and machine learning technologies. Known for deploying scalable models in cloud environments and leading data-driven projects from concept to execution. Adept at statistical analysis, data mining, and developing AI-driven methodologies that optimize business processes. Passionate about turning complex datasets into actionable insights to

drive business success.

...

## ■ **\*\*Final Resume Tips\*\***

- **Use Action Verbs:** Start bullet points with action verbs such as Developed, Designed, Implemented.
- **Quantify Achievements:** Where possible, add numbers to qualify your impact (e.g., improved performance by 20%).
- **Tailor Skills:** Align your skills section more closely with the job description, especially by adding missing skills.
- **Consistency:** Ensure consistency in formatting and tense throughout the resume.
- **Future Dates:** Avoid listing future dates for your projects or experiences; substitute with realistic timelines.
